

# iW6401 smarteXite™ Digital LED power processor

November 2014

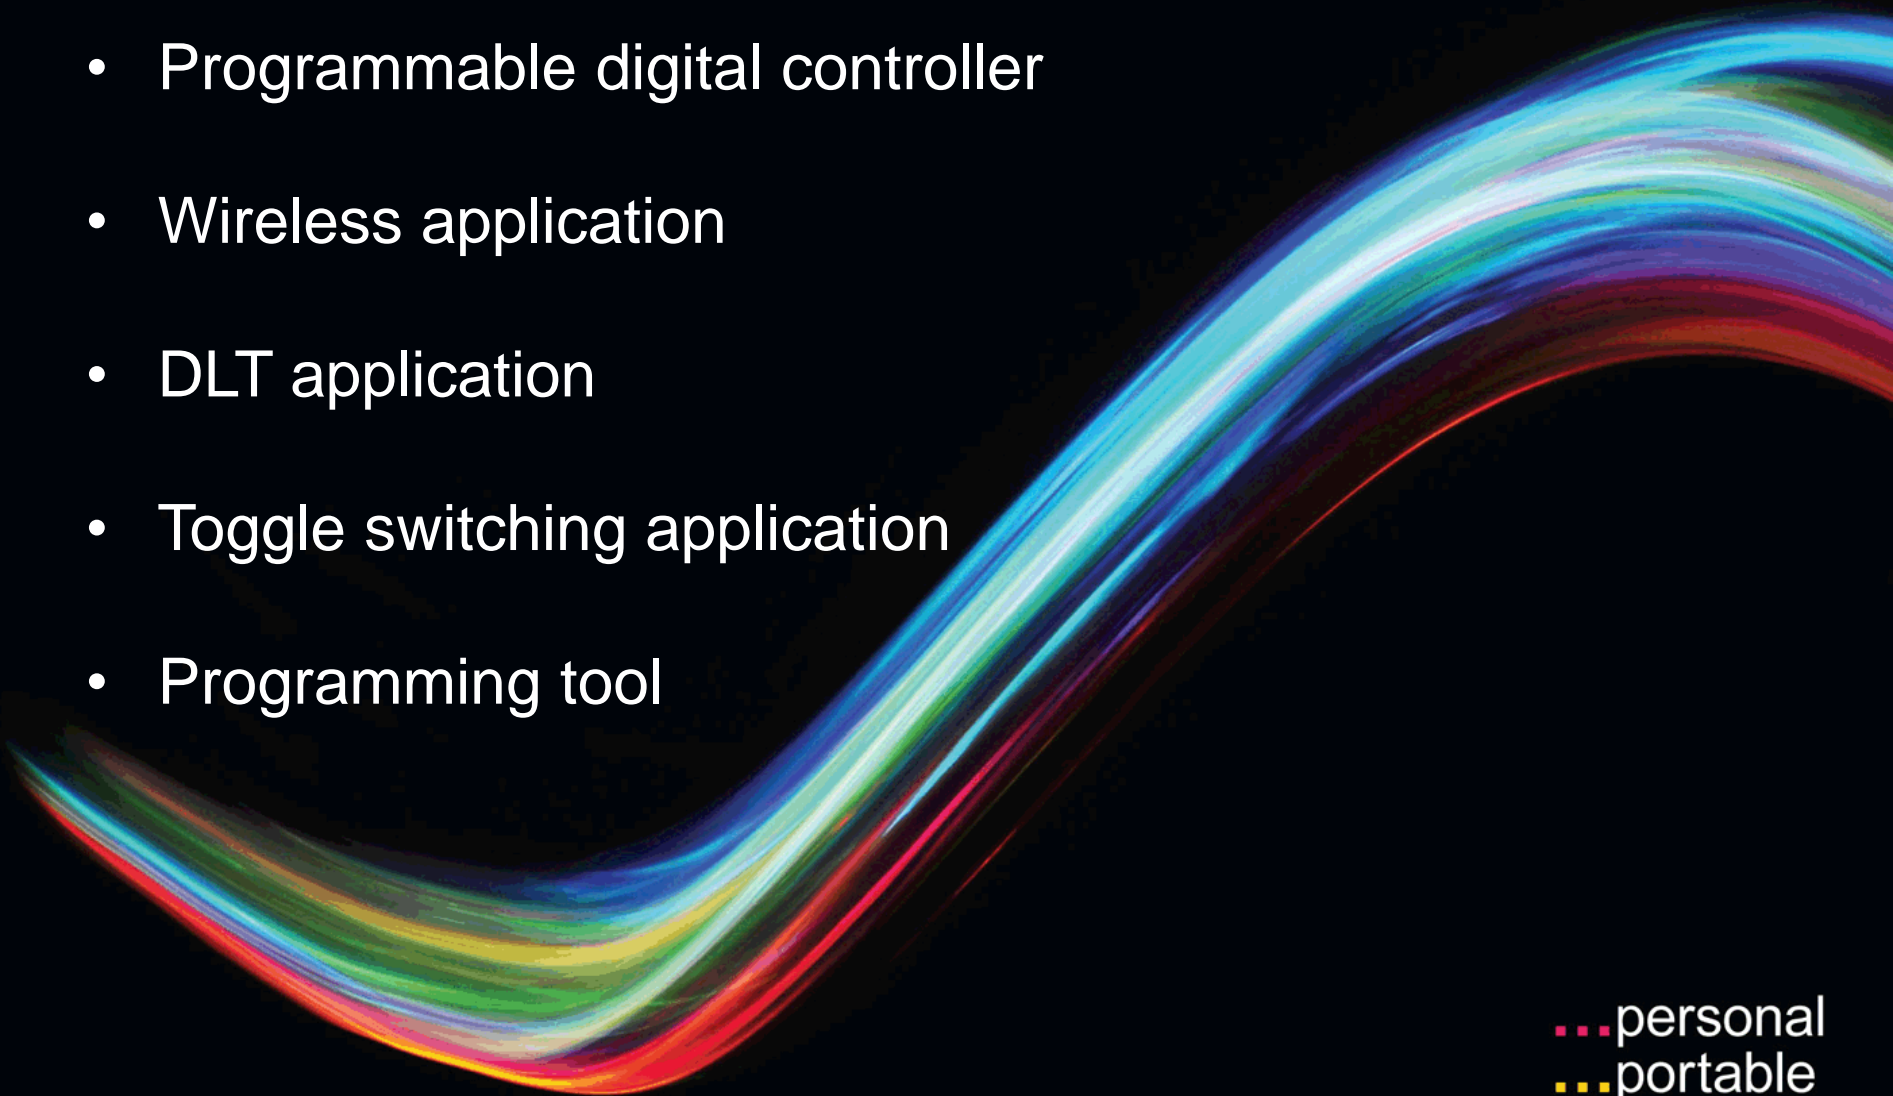

...personal  
...portable  
...connected

# Agenda

- Programmable digital controller
- Wireless application
- DLT application
- Toggle switching application
- Programming tool

A large, colorful, wavy graphic that flows from the bottom left towards the top right, composed of multiple overlapping, blurred lines in shades of blue, cyan, green, yellow, and red, set against a black background.

...portable  
...connected

### ■ Fully programmable digital LED controller chip

- Big reductions in R&D time
- Bringing products to market faster

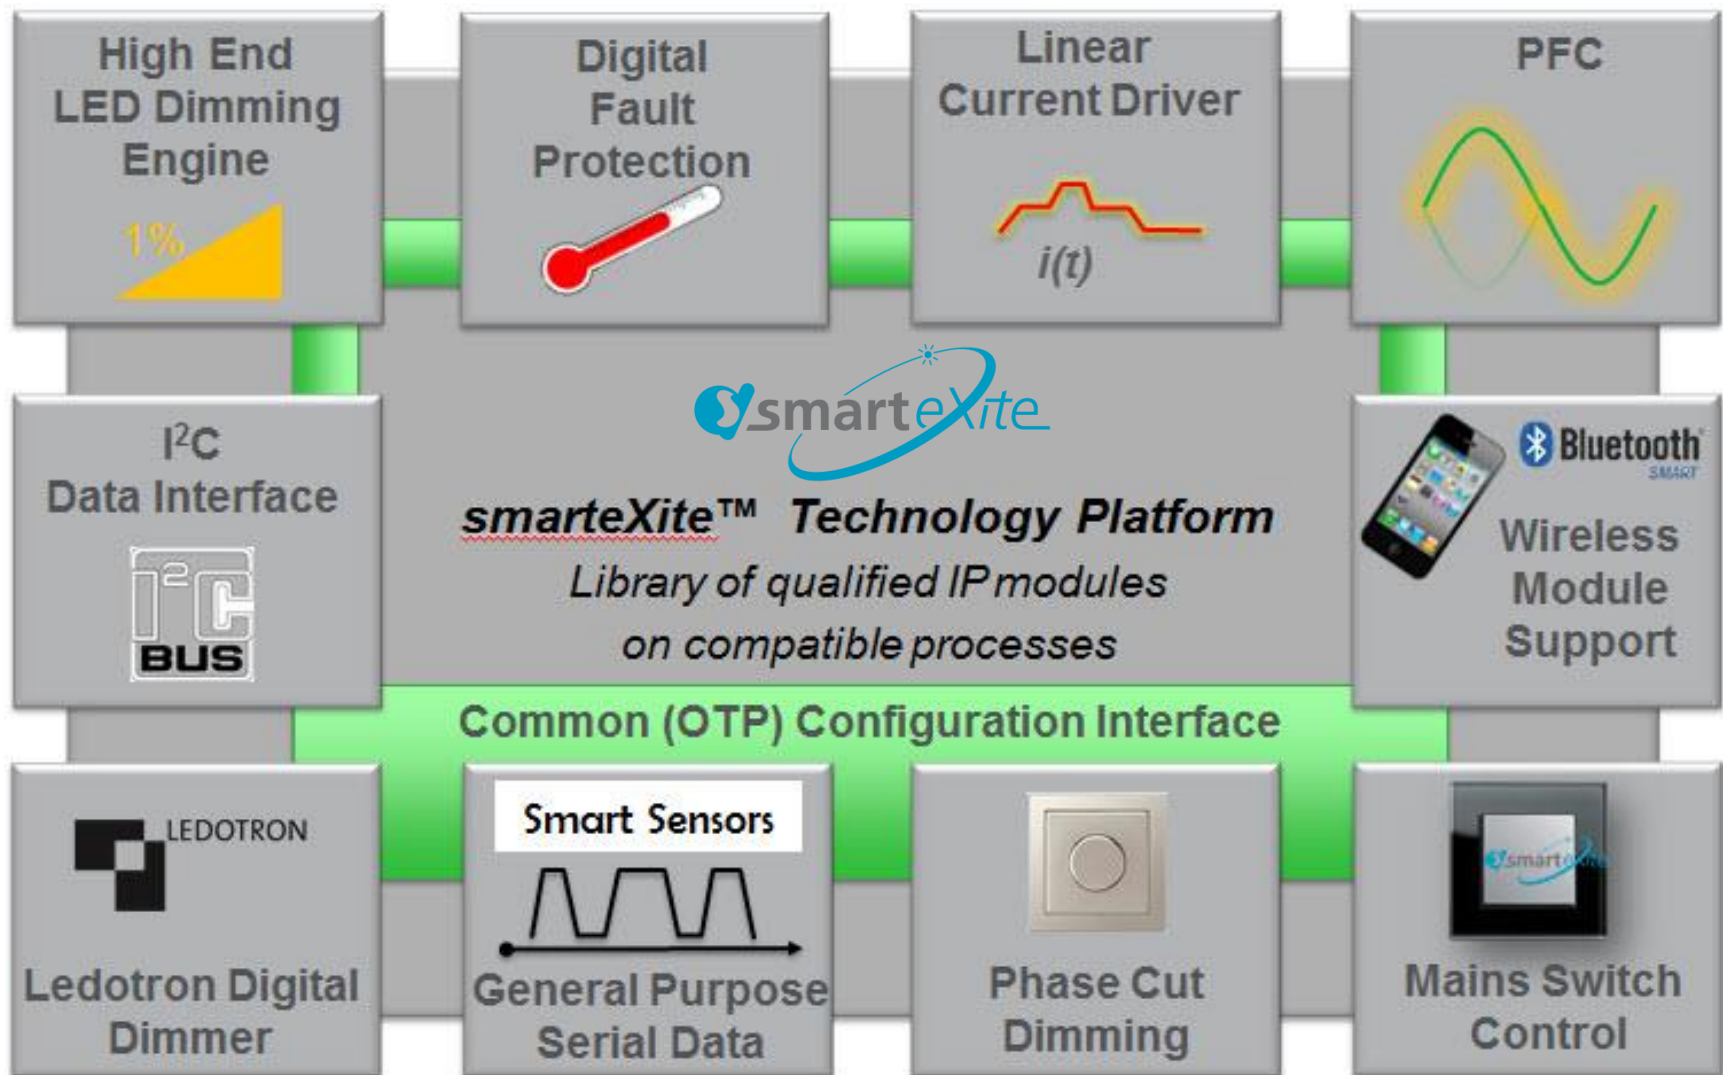

### ■ Flexible to change

- Old way: family of inflexible controller chips (spec change = HW change)
- smarteXite™ way: **single chip controller** providing **programmable LED bulbs**

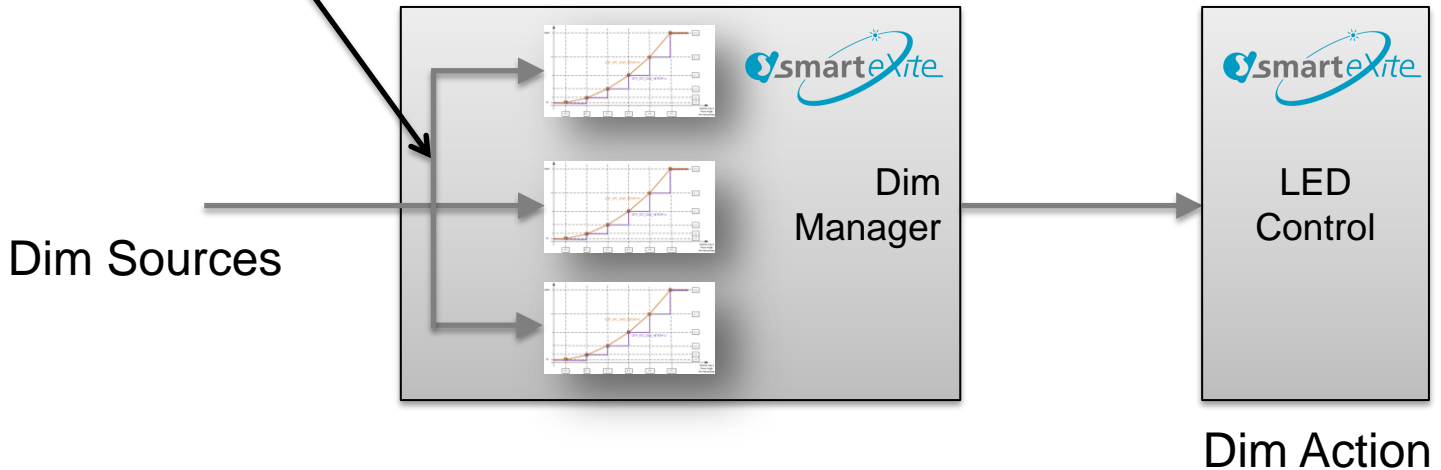

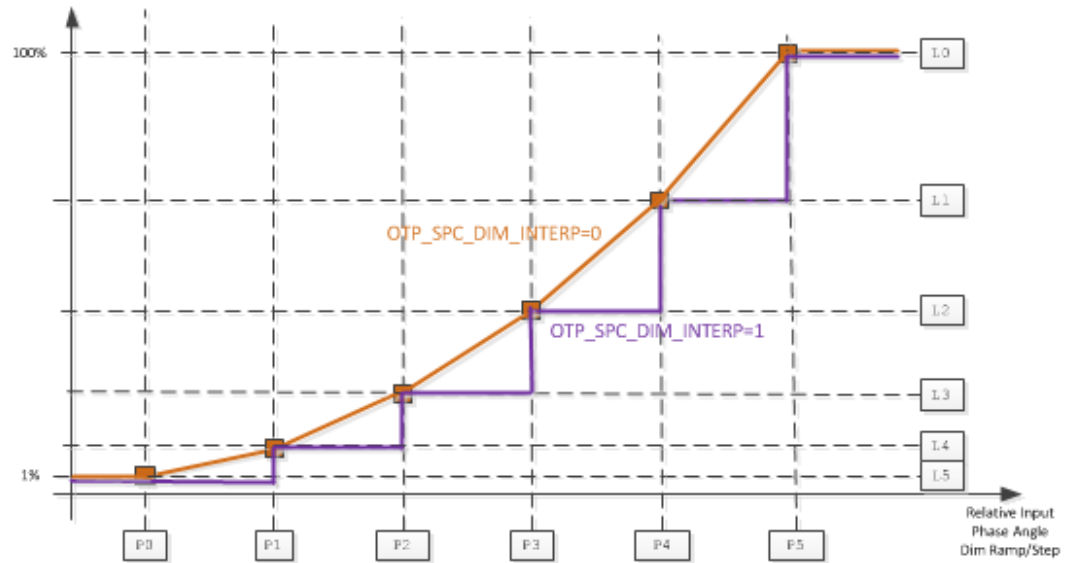

**What others do in hardware,  
SmarteXite does in software!**

# smarteXite™ Offering Ultimate Flexibility

# smarteXite™ Dimming Curve Programming

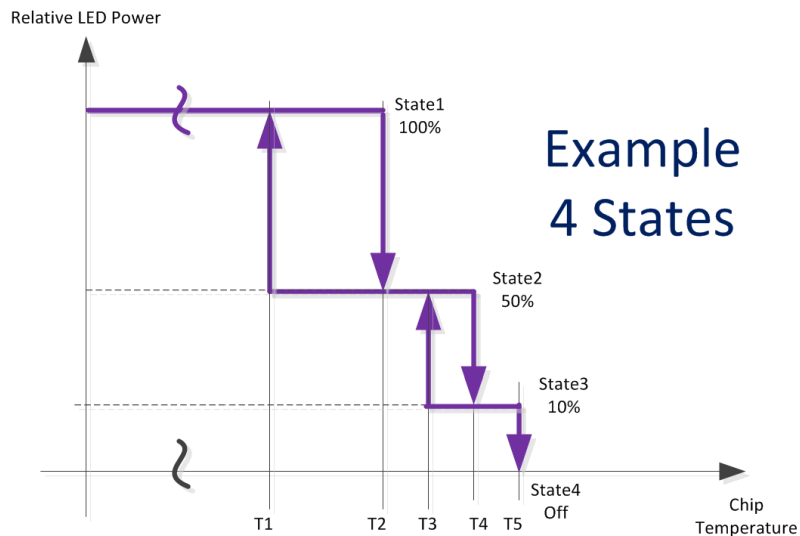

Multiple lookup tables for easy trimming of dim curves for optimized user experience.

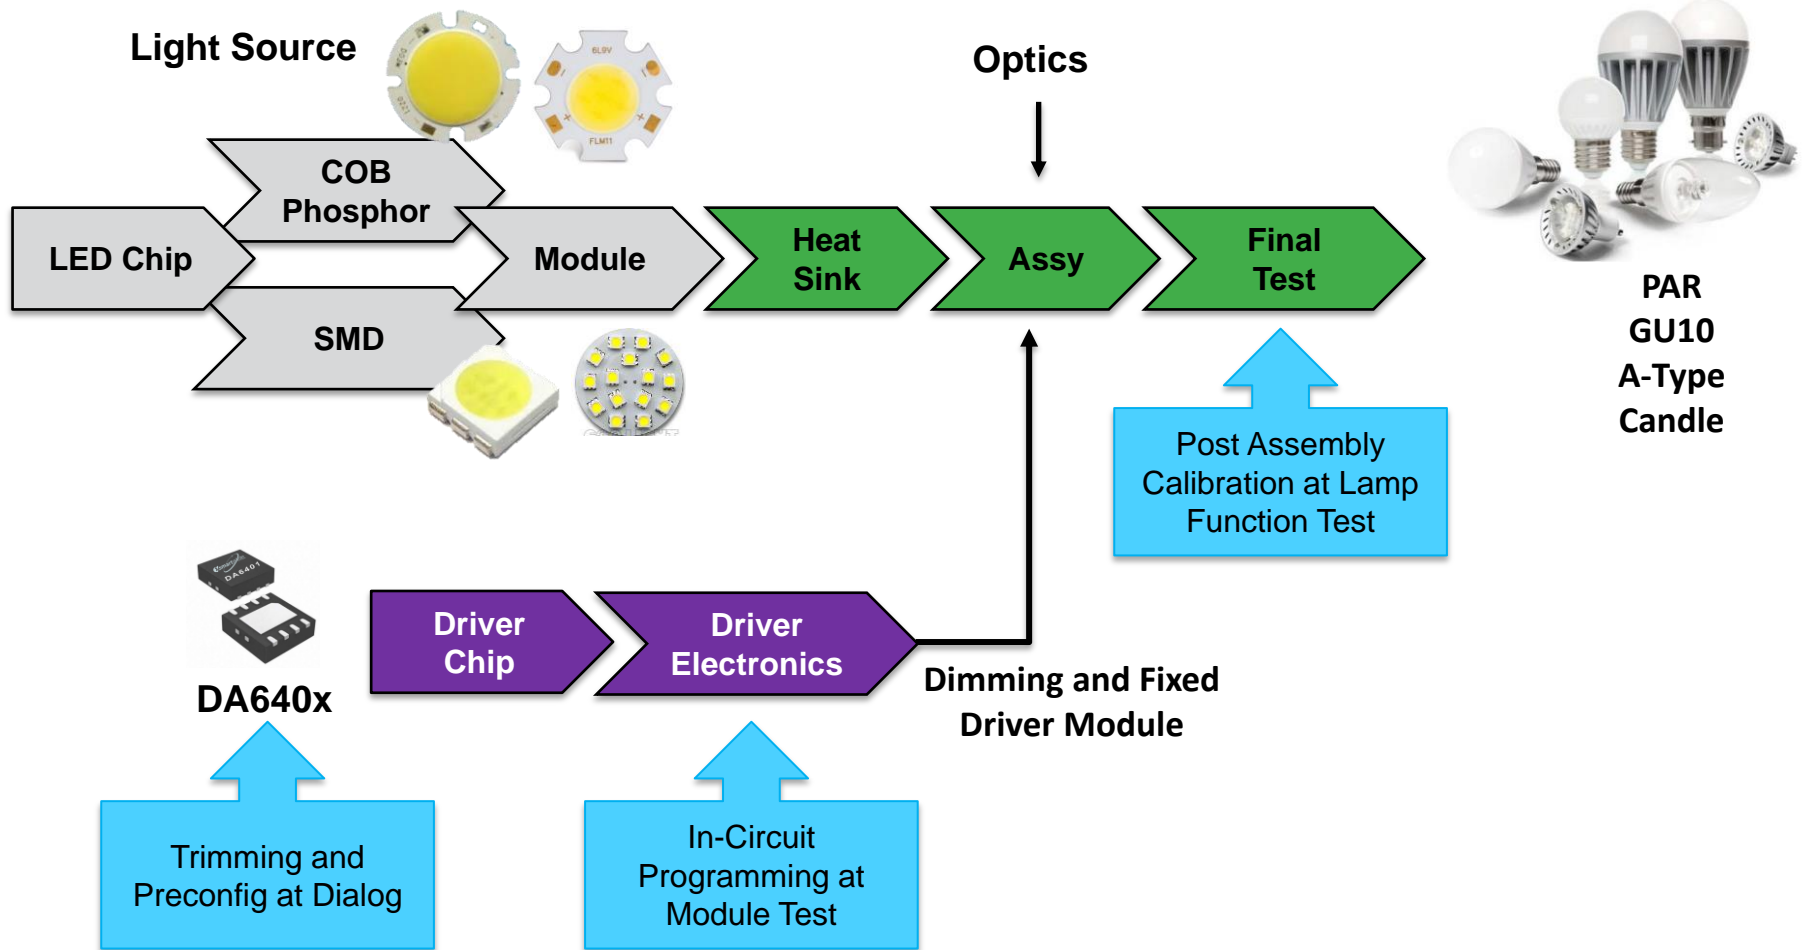

# Optimized Thermal Management with Dynamic Temperature States

For each state  $T_{min}$ ,  $T_{max}$ , and  $L_{out}$  are set in OTP.

# OTP Programming Possible at Different Stages of Value Chain

# Post Assembly Calibration and Diagnostics

200V Serial Bitstream

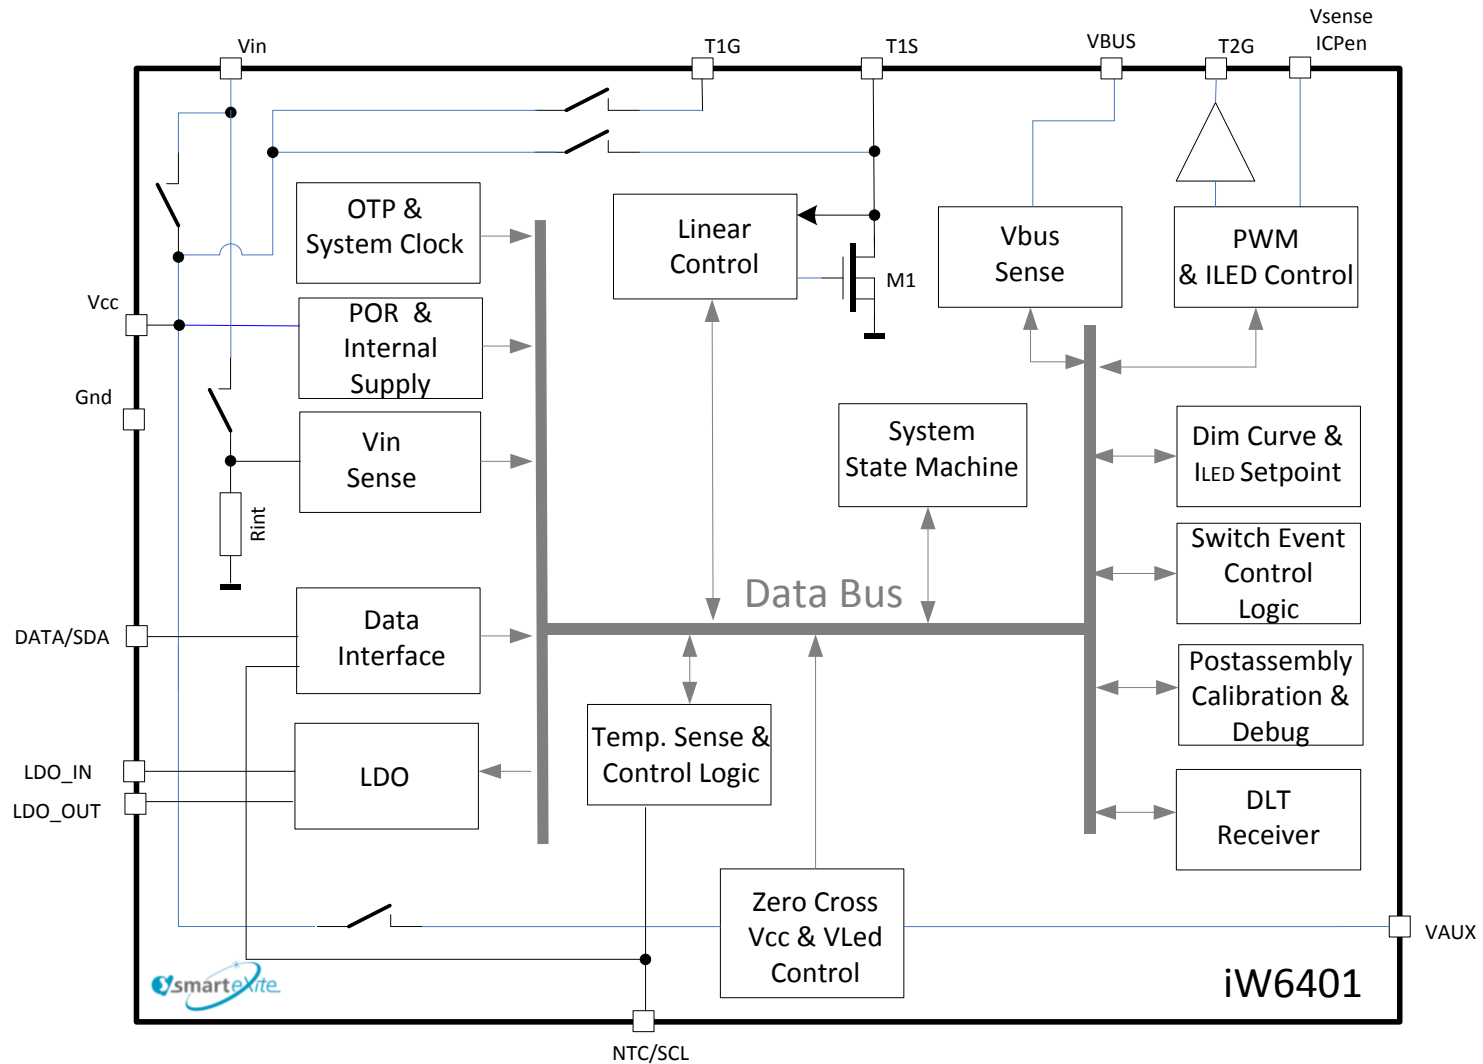

Calibration data is only received if no phase cut dimmer is present and data reception is not locked out.

iW6401

# iW6401: Multiple Application Options

AC Mains

- Phase Cut Dimming
- Mains Switch Controlled Dimming
- **Power Line Communication**

Modular approach for highest flexibility

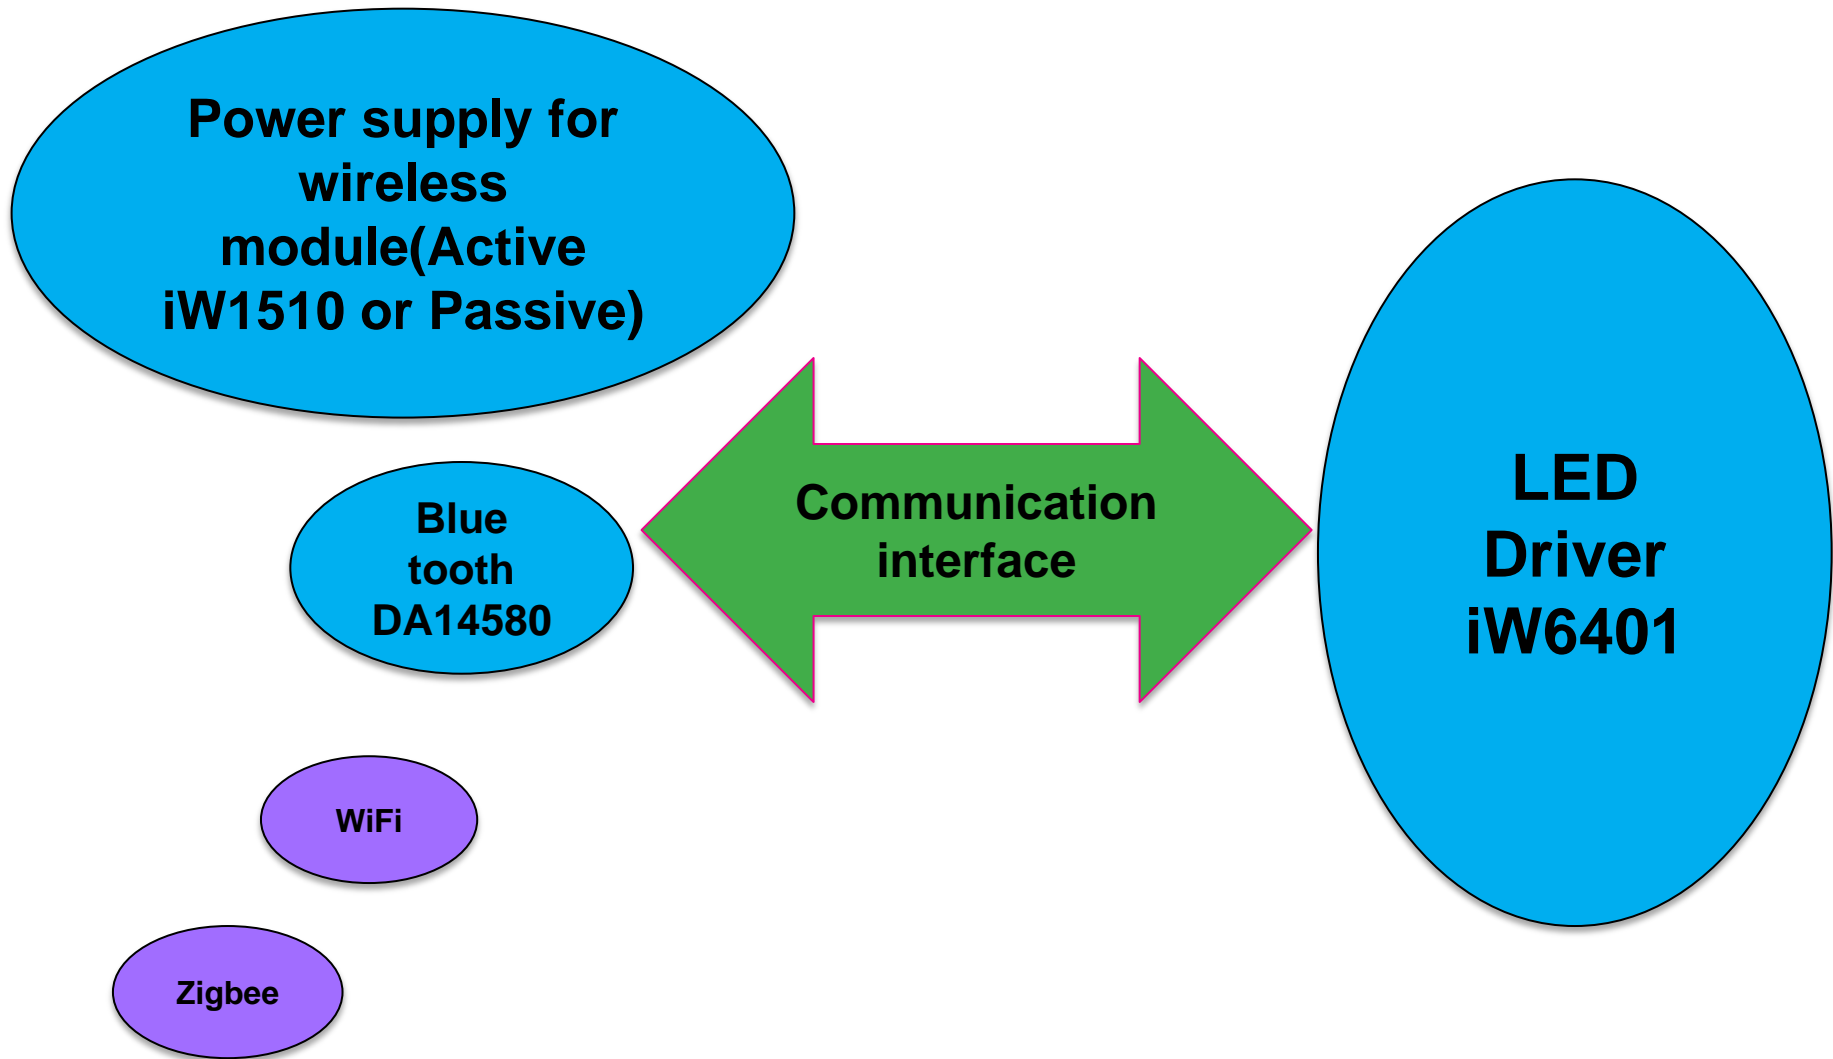

DLT IEC62756

- Open Protocol
- Simple & Robust
- IEC Standardization Ongoing
- Low Cost Implementation
- Addressable
- Multi-Channel (Color, Tunable White)
- Improved Electrical Efficiency
- Simple Replacement of Dimmers
- Plug and Play
- Perfect Room Controller
- Perfect Gateway to Bridge the Last Mile

# Wireless Lighting Control

# Wireless Lighting Control to the Smartphone

- iW6401 and DA14580 “ready to go” Bluetooth® LED driver solution
- Compatible with every Bluetooth 4.0 enabled smartphone
- Lowest power consumption 5ma RX/TX, 5nA sleep
- 0dBm output RF power (at antenna), -93dBm sensitivity for reliable communication in Bulb / Fixture assembly
- Precise control of LED operation using high speed I<sup>2</sup>C data link between LED driver and BT transceiver

# Dialog Provided BT Communication Module

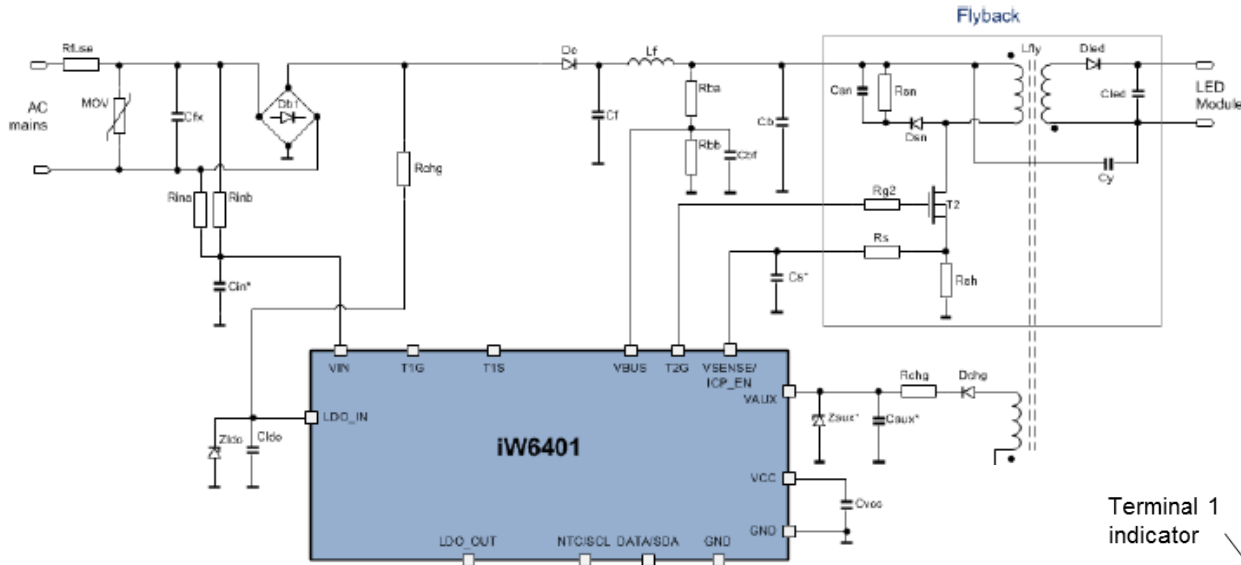

DEMO HW

**DA14580  
Radio Chip and  
Antenna**

- BT module with header connection to driver PCB
- Optimized RF performance
- FCC & CE certification
- Minimum design-in effort
- Range up to 20m

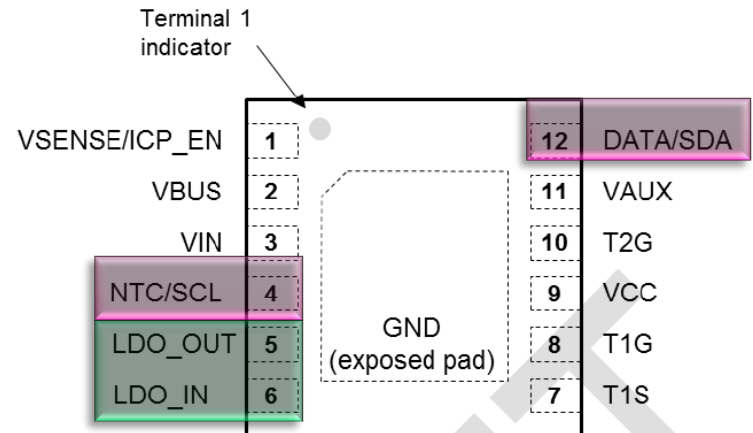

# Wireless Dimming\_BlueTooth Application

\* Recommended component. Not required in all applications.

PCB Submodule

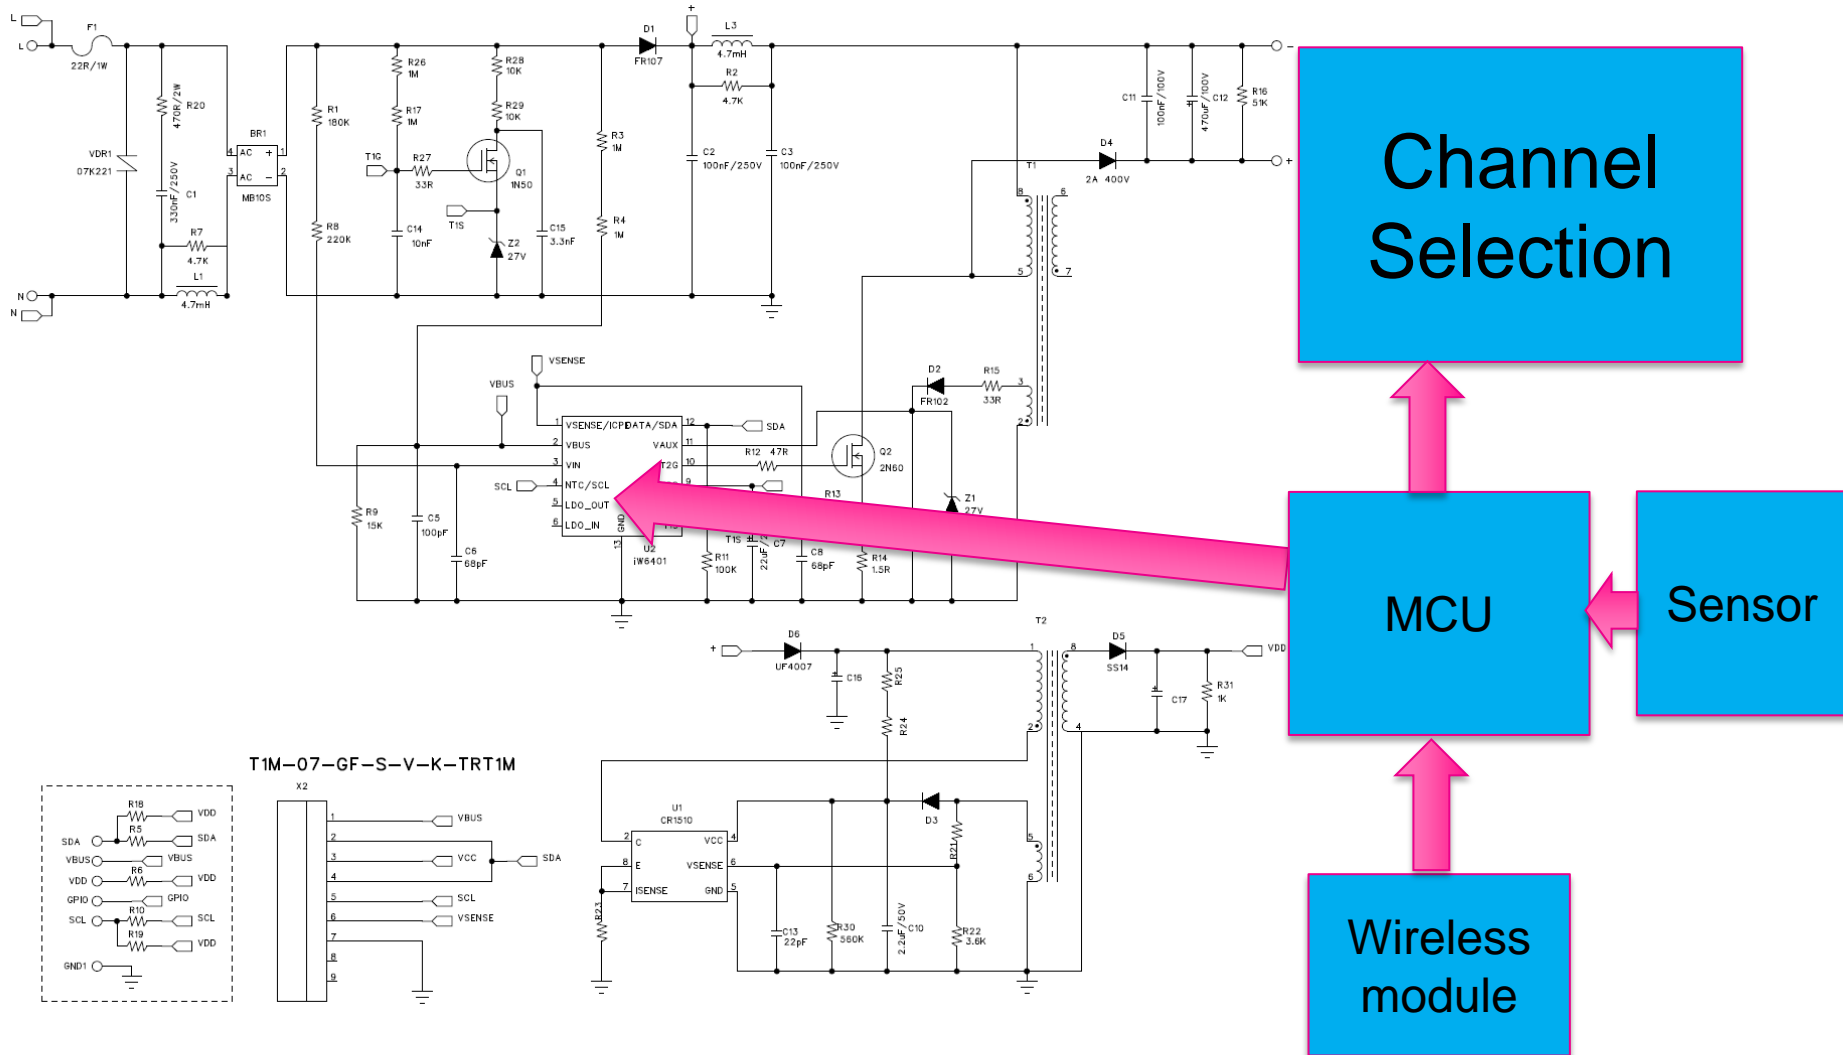

Transparent top view

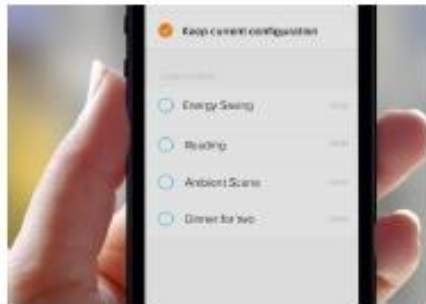

# Tunable white and color change solution

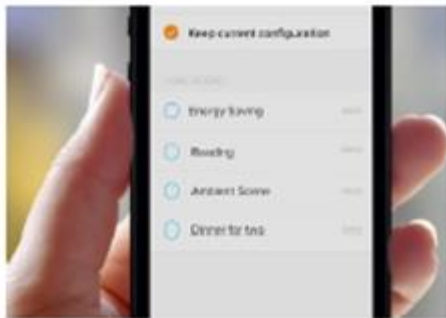

# Blue Tooth Control

## Room1

- Easy-to-use GUI
- Protected against foreign access
- Designed by HMI experts (human machine interface)
- Hierarchical structure room/group/lamp
- Continuous dim
- On/Off control
- Scene set and recall
- Wizards guide through system config
- Easy replacement and modification

## PROS

- Minimal power consumption
- Small size
- Direct interface to smartphone
- Profiles ensure interoperability
- Applicable to all markets
- Low cost
- Secure data transmission

## CONS

- No direct cloud access
- No mesh networking

# DLT Digital Dimming Technology

- Ledotron is a brand name from OSRAM/INSTA for a new digital dimmer technology referred to as DLT “Digital Loadside Transmission”
- DLT is a new dimming control technology developed by OSRAM to **replace and extend phase cut dimming**
- **DLT resolves all problems** with phase cut dimmers
- **It is a digital** addressable multi-channel protocol. It supports group addressing as well as tunable white and color control
- DLT is fully **retrofitable**
- Standardized in **IEC62756. Open Standard, no licenses required**
- Perfect digital link for the **“last mile”** to connect to home and building automation

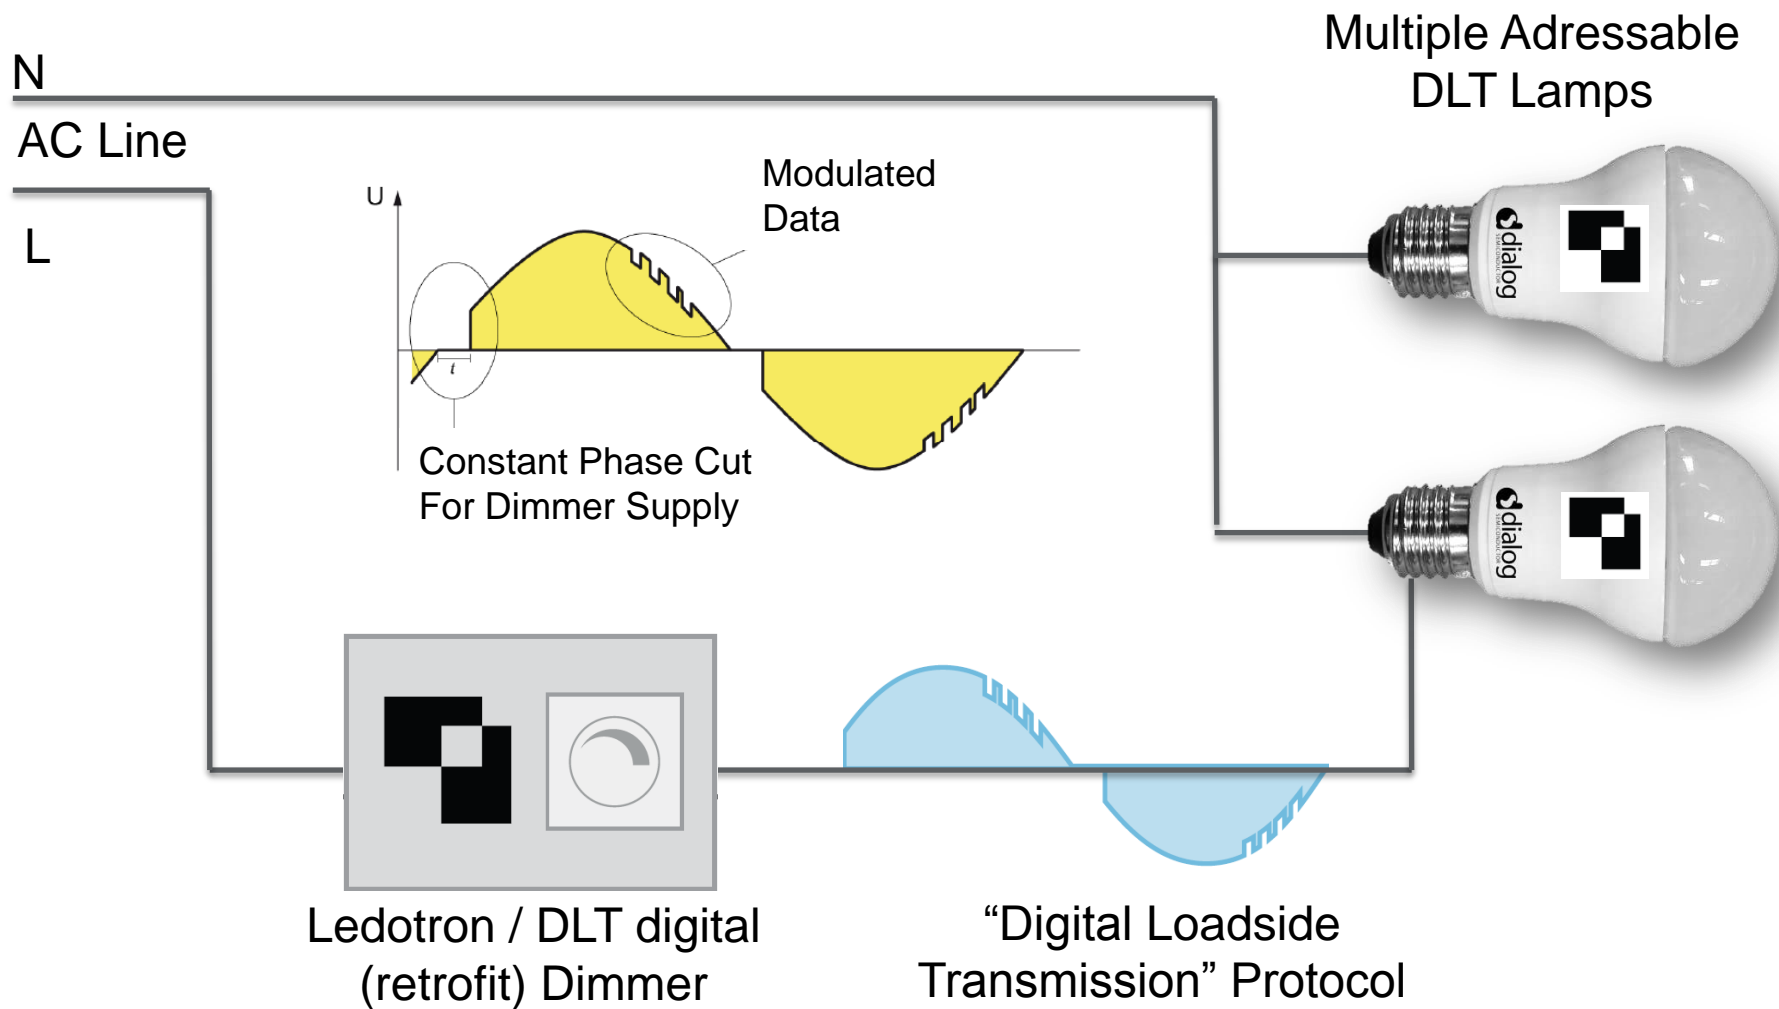

# Benefits of DLT Dimming Technology

- Resolves all compatibility problems with phase cut dimmers
- Applicable worldwide
- Small driver size fits for GU-10
- Better electrical performance (no bleeder losses)
- No audible noise, No reliability issues, No light flicker or shimmer
- Up to 100m cable between dimmer and light source
- Any number of lamps, limited only by total power
- Much better electrical efficiency of the LED driver over traditional phase cut dimmers

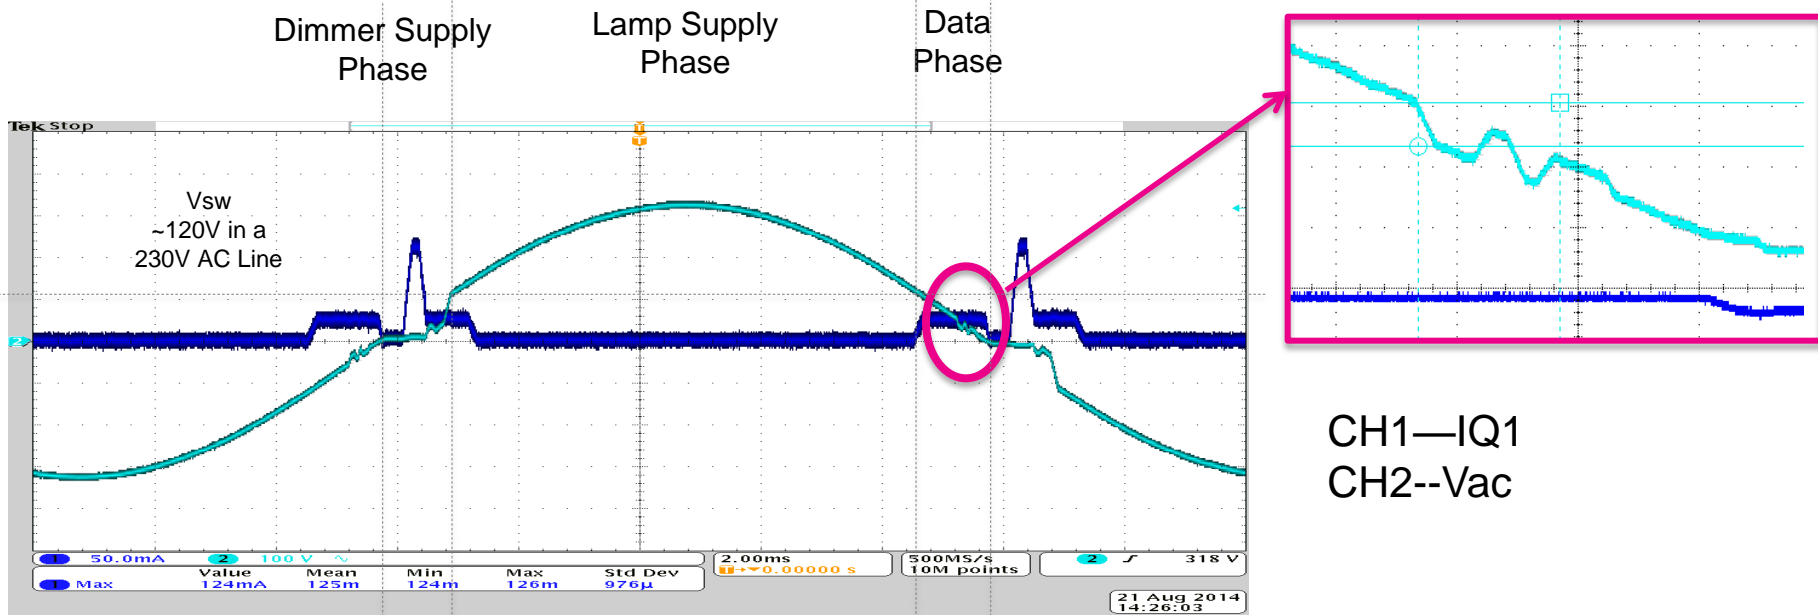

# DLT Digital Retrofit Dimming

## Digital Dimmer for a Digital Light Source

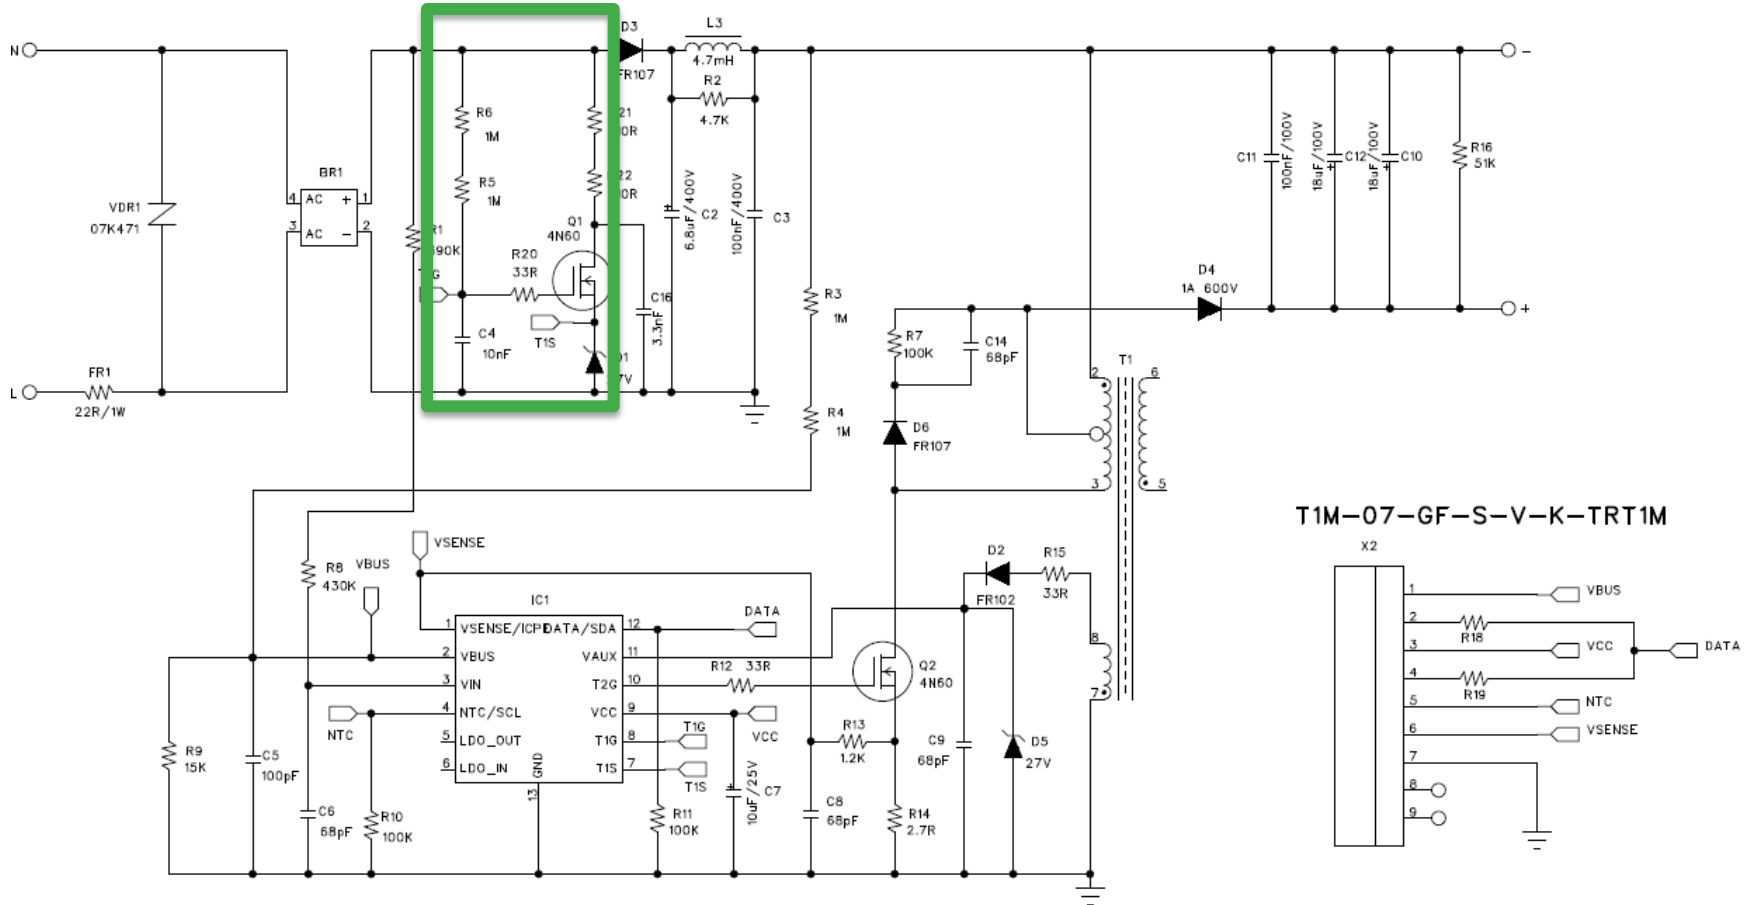

# DLT bypass circuit operating with dimmer connection

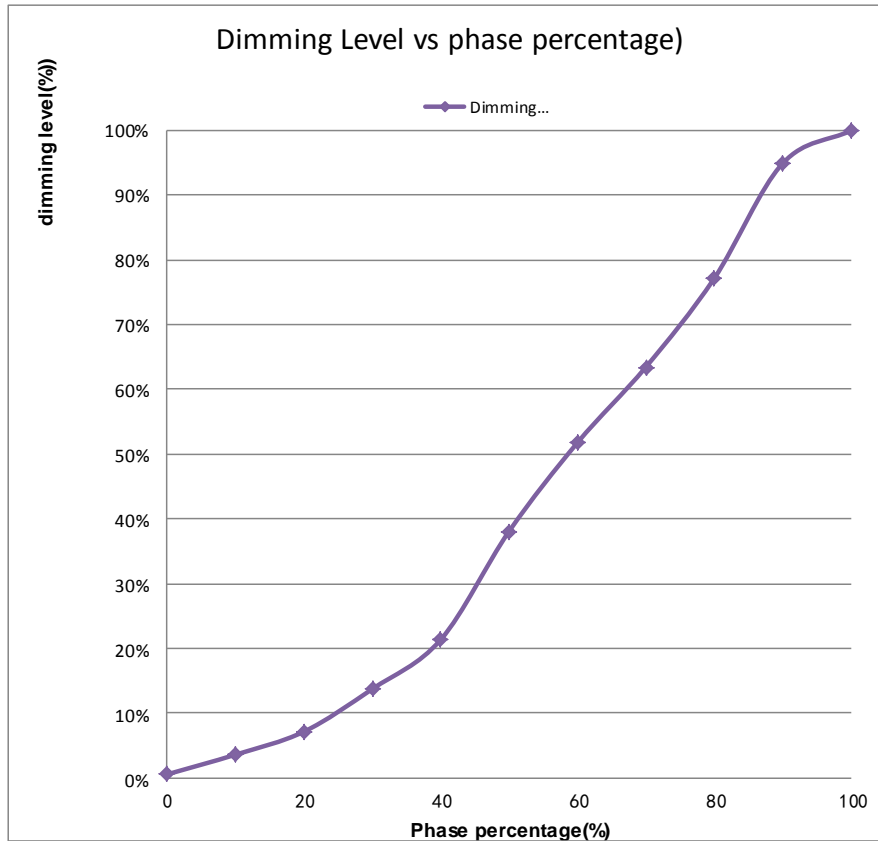

- During dimmer supply phase the lamp shall provide current sink capability and the mains voltage will be low, similar to leading edge case
- During Lamps Supply phase the full mains AC line voltage is applied to the lamp regardless of dim level. This allows for perfect dimming between 100% and below 1%
- During Data phase the lamp shall provide a low current sink capability and Data Bits are modulated on top of the AC line voltage
- 2 Data Bits are transmitted per half wave, 16 Bits in total per frame this makes a data rate of 200Byte/sec in a 50Hz Domain

# iW6401 DLT Single-Chip Solution

## Bypass circuit

# Dimming Curve \_ LEDOTRON Dimmer

Dimmer Scale	Iout (mA)	Dimming Level(%)
0	1.0	1%
10	7.0	4%
20	14.0	7%
30	27.0	14%
40	42.0	21%
50	75.0	38%
60	102.0	52%
70	125.0	63%
80	152.0	77%
90	187.0	95%
100	197.0	100%

**Dimmer type : INSTA 51191002**

## Manual Toggle Switch Control

# Manual Toggle Switch Control for Intuitive Smart Lighting Experience

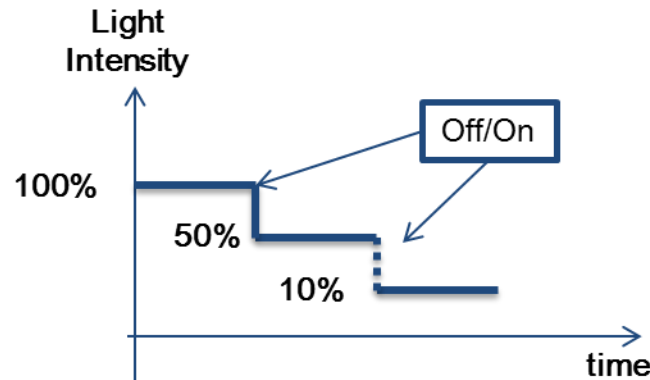

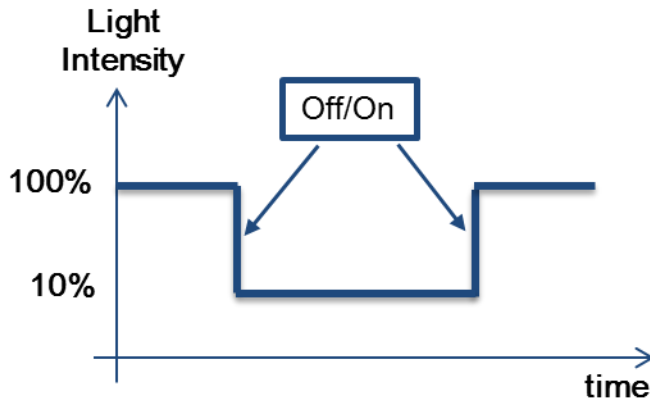

- Coexistence of manual and assisted control is a must have requirement for smart lighting technologies
- Even without the use of wireless or digital dimming the smarteXite technology makes every lamp dimmable without the presence of dimmers
- Toggle switch operating mode can differ between lamp models ranging from simple 2 level control to more advanced linear dim ramp approach
- Using the unique smarteXite multi stage programming model the toggle switch operating mode can be set on chip-level, at driver assembly or in the final product

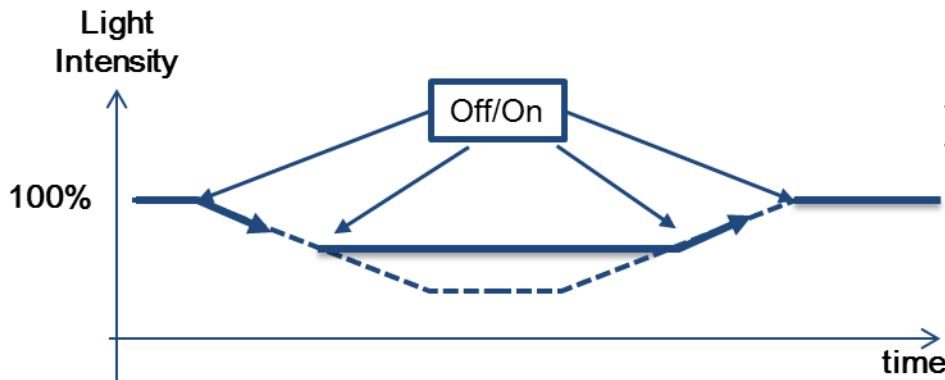

# Manual Toggle Switch Control for Intuitive Smart Lighting Experience

- On** Switch is steady on
- Off** Switch is steady off
- Off/On** Switch is turned off/on within 1-2sec

Toggle to move between illumination states

Toggle to trigger dimming ramp  
Toggle again to hold most recent value

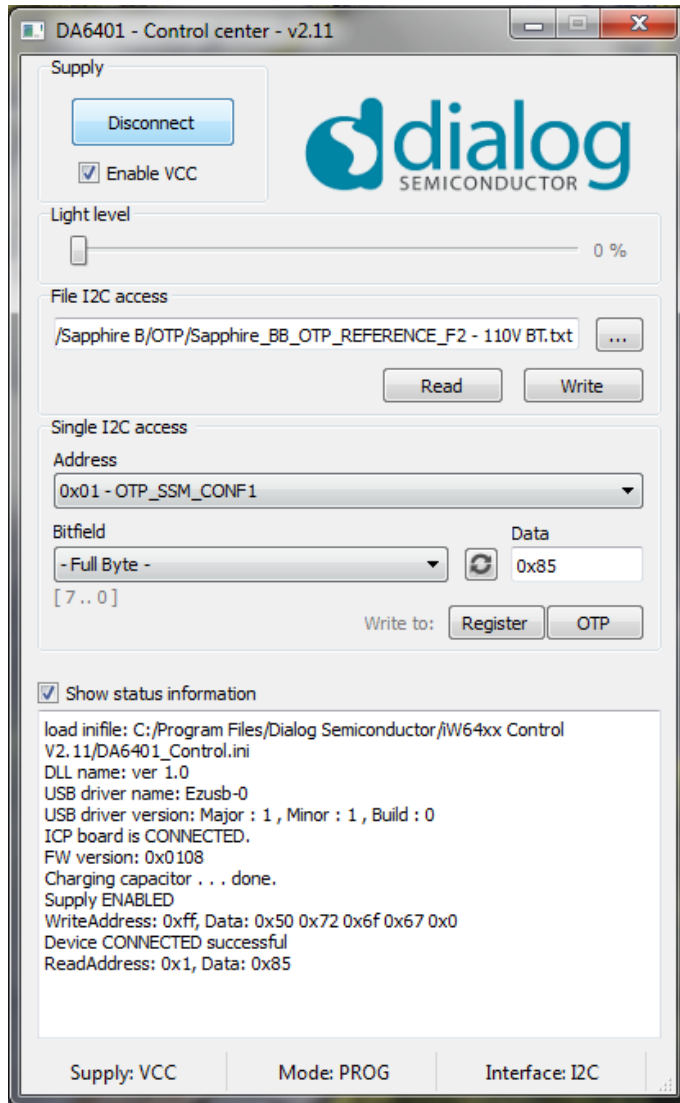

# Programming Tool

# Programming Tool

# Programming \_Register configuration

Single I2C access

Address  
0x56 - OTP\_FLY\_ILED\_NOM[0]

Bitfield  
- Full Byte -  
[ 7 .. 0 ]

Data  
0x2c

Write to: Register OTP

Table 58: OTP\_FLY\_ILED\_NOM (0x56 to 0x55)

Bit	Mode	Symbol	Description	Reset
15:0	R/W	OTP_FLY_ILED_NOM	Nominal LED current at 100 % light level. Unit: 1 mA. Range: 0 mA to 1023 mA (0x000 to 0x3FF). <b>Note:</b> Register OTP_FLY_KN must be set correctly.	0x012C

# Programming \_Flyback register configuration

Addr	Addr	Sect.	Dec default value	Hex Default value
74	FLY_BLANK_OC	Blanking time for the flyback shunt current overcurrent sense after positive edge of gate on signal	88	58
75	FLY_T_MIN	Minimum flyback periode time. Used for valley mode switching skip cycles. From 100kHz - 250kHz	50	32
76	FLY_TON_MAX	Maximum on time of the flyback	100	64
77	FLY_TOFF_MAX	Maximum off time of the flyback	255	FF
78	FLY_TON_MIN_LOW	Flyback on time in ton_min mode. Used when Vcc is discharging or when Vcc regulation mode is disabled.	5	05
79	FLY_TON_MIN_HIGH	Flyback on time in ton_min mode. Used when flyback is charging Vcc; Vcc regulation mode must be enabled.	15	0F
7A	FLY_TOFF_MIN	Flyback off time in ton_min mode	127	7F
7B	FLY_TOFF_RAM P	Fixed off time of the flyback during ramp mode.	100	64
7C	FLY_VSENSE_OC_THRES	Threshold level for vsense Over current comparator	255	FF
7D	FLY_PWM_PHASE	Centre point for flyback modulation. Point is set relative to the timebase phase count.	238	EE
7E	FLY_PWM_MIN	Minimum duty cycle of flyback modulation

Sources

Change LED Modules  
for a Given Hardware Topology  
in Minutes

- Reduced complexity
  - Simplified supply chain - one chip fits all
- Ultimate flexibility
  - High future proofing; low design risk
  - Single chip supports different LEDs, wattages, feature sets
- Driving down cost

# iW6401 smarteXite LED Driver Summary

- Fully configurable platform solution
  - Fastest time to market---don't have to change hardware for modify design
  - Optimized system cost
  - Maximize economy of scale
- Disruptive **digital dimming technology** for future-proof compatibility
  - Industry first support of Ledotron / DLT digital dimming technology
  - Parallel support of phase cut dimmers
  - Configurable toggle-switch based dimming
- Full **connectivity** to high level communication
  - Connects to any wireless communication
  - Connects to any microprocessor with simple low cost 1 wire digital interface
- Industry first **“end of line” programming** feature
  - Ultimate accuracy of light output with calibration at final manufacturing state
  - Full manufacturing process control with diagnostics feature
- Programmed safety and lifetime with **configurable thermal control** logic

# The power to be...

-  personal
